

ABOUT ME

Results-driven Telecommunications and Fiber Network Technician with extensive hands-on experience in FTTH deployment, GPON network architecture expansion, enterprise LAN infrastructure, and critical fiber optic link restoration across Rwanda. Highly skilled in fusion splicing, optical power budget engineering, fiber fault diagnosis, and advanced field troubleshooting for high-availability telecom environments.

Proven ability to manage standalone regional network operations, execute large-scale infrastructure deployments, and restore backbone connectivity with minimal service downtime. Experienced in supporting tier-1 telecom infrastructure projects and enterprise connectivity implementations while maintaining high standards of network reliability, service quality, and operational efficiency.

Formerly contributed to major infrastructure rollout projects under Liquid Telecom subcontracting operations in Kigali, leveraging strong field expertise to advance into a dedicated Regional Technician role focused on network stability, rapid fault resolution, and continuous service availability.

SKILLS

- Fiber Optic Installation & Fusion Splicing
- FTTH Deployment & Advanced Troubleshooting
- Optical Power Link Budgeting (ODN to ONT)
- Underground & Overhead Fiber Cable Deployment
- Cisco Packet Tracer (Router & Switch Config)
- LAN Networking & Structured Cabling Setup
- CCTV Camera & Network Video Recorder (NVR) Setup
- IP Phone Configuration & PBX Initialization
- Team Management, Supervision & Direct Client Support
- Adding & Engineering New FDN Environments

WORK EXPERIENCE

LIQUID INTELLIGENT TECHNOLOGIES | 2025 – Present

Dedicated Regional Field Technician, Nyagatare, Rwanda

- Executed high-quality fiber installations, physical overhead/underground cable deployments, and link restoration projects across to the dedicated region in nations network branches.
- Collaborated extensively with the Project Engineering Department to install, build, and configure new FDN splices and node environments dynamically based on load requirements.
- Appointed to supervise and guarantee overall regional fiber network availability, backbone protection, and customer connection integrity across the zone.
- Manage end-to-end active preventative maintenance routines on regional distribution frameworks and handle physical link restorations.
- Serve as the localized direct engineering point for complex business subscriber link degradations, handling critical SLA resolution milestones autonomously.

NERO SERVICES LTD (Subcontractor for Liquid Intelligent Technologies) | 2023 - 2025

Fiber Optics Field Technician (Technite), Kigali, Rwanda

- Executed high-quality end-to-end client provisioning, managing physical overhead/underground drop cable layouts and initializing ONTs matching strict telecom specifications.
- Handled responsive tier-2 urban troubleshooting loops, isolating signal drops, macro-bends, and cable faults from core splitter arrays down to home terminals.

- Engineered physical network extensions across expanding urban sectors by constructing, splicing, and testing new Fiber Distribution Nodes (FDNs) and ODF frameworks.
- Configured physical enterprise endpoints, including structured local copper wiring setups, IP phone profiles, and centralized PBX equipment initialization.

RWANDA MOUNTAIN TEA | 2022 - 2023

Production & Dispatch, Rwanda

- Supervised daily factory dispatch logistics, technical production pipelines, and automated manufacturing systems maintenance.
- Coordinated with internal cross-functional operational workflows to maintain high efficiency and strict quality control criteria across industrial tea production cycles.

KEY PROJECTS IN TELECOMMUNICATIONS

- **Gahanga Cricket Stadium:** Designed and implemented full enterprise LAN network setup, structured cabling architecture, routine system maintenance, and performance hardware troubleshooting.
- **Saphir Boutique Hotel & Sainte Famille Hotel:** Re-organized centralized network infrastructure, systematically restructuring server racks, labeling distribution switches, and executing fiber splicing linkages using high-speed SFPs.
- **DIA Installation (Rwamagana YUSSA PLAZA):** Spearheaded complex Dedicated Internet Access (DIA) setups, including overhead cable layings, physical ODF termination box installation, and seamless client migration to MPLS networks via splice closures.
- **Enterprise IP Hospitality Setups:** Installed multi-vendor hardware environments featuring enterprise access points, PoE switches, unified IP Phones (Yealink, Cisco, Huawei), and centralized Yeastar PBX system initialization.
- **Wahl Professional:** Deployed physical and digital physical security frameworks through advanced network video recorders (NVRs), IP camera feeds, and secure switching configurations.

EDUCATION

University of Lay Adventists of Kigali (UNILAK) | Expected 2027

Bachelor of Information Technology with Options in Networking (Currently Attending), Kigali, Rwanda

Ecole Secondaire Saint Jean De Murunda | Graduated 2018

Advanced Level (A-Level) Certification - MCB Combination

Ecole Secondaire Saint Jean De Murunda | Graduated 2022

Ordinary Level (O-Level) Certification

LANGUAGES

Kinyarwanda: Native / **English:** Advanced & Professional Alignment
